Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 1 is rejected under 35 U.S.C. 102(a) and (e) as being anticipated by Lin et al (US 6,013,227 A).

Lin et al teaches a system for microbially decontaminating a device wherein the system includes a cabinet 2 defining a chamber for receiving the device, spray nozzles 22a (Figure 1E; col.13, lines 56-63) for spraying a decontaminant fluid over an external surface of the device, a support 58 for the device within the container (3A, 3B), and an activation system which displaces at least a portion of the support for changing points of contact between the device and the support (col.15, lines 40-48).

Allowable Subject Matter

3. Claims 2-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter:

Although Lin et al teaches a system wherein a portion of the support is displaced so as to change

Art Unit: 1744

the points of contact between the device and the support, Lin et al fails to teach or suggest: (a) a support which is supported adjacent an upper end for pivotal movement, (b) a poston assembly activation system, (c) nozzles and device positioned such that the nozzle spray impacts at no more than 45 degrees from perpendicular to the external surface of the device, (d) a support including pegs to bend the device into an arc with a minimum radius of no less than 15 centimeters, and (e) a clip releasably coupling a tip portion of the device to one of the support and another portion of the device.

5. Claims 12-20 are allowed.

6. The following is an examiner's statement of reasons for allowance: Although Lin et al teaches a system wherein a portion of the support is displaced so as to change the points of contact between the device and the support, Lin et al fails to teach or suggest: a system wherein the support is a rack configured to support a coiled endoscope, the rack being pivotally and removably hung on a hanger and a reciprocating drive having a drive member extending from the chamber rear wall to engage and push the rack to pivot on the hanger. Nor does Lin et al teach or suggest a method wherein the support is *agitated* to change points of contact between the device and the support.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
